Adaptive Filters Theory And Applications

Adaptive filtering can be used to characterize unknown systems in time-variant environments. The main objective of this approach is to meet a difficult comprise: maximum convergence speed with maximum accuracy. Each application requires a certain approach which determines the filter structure, the cost function to minimize the estimation error, the adaptive algorithm, and other parameters; and ...

ADAPTIVE FILTERS - WordPress.com

An adaptive filter is a system with a linear filter that has a transfer function controlled by variable parameters and a means to adjust those parameters according to an optimization algorithm. Because of the complexity of the optimization algorithms, almost all adaptive filters are digital filters. Adaptive filters are required for some applications because some parameters of the desired ...

4 Adaptive Filtering Applications and inverse modeling. The differences between the configurations are given by the way the input, the desired and the output signals are used. The main objective of this chapter is to explain the typical configurations and it will focus on recent applications of adaptive filtering that are used in the real world. 2.
