Index of Time Series Data Sets from Box, Jenkins, and Reinsel

In time series analysis, the Box-Jenkins method, named after the statisticians George Box and Gwilym Jenkins, applies autoregressive moving average (ARMA) or autoregressive integrated moving average (ARIMA) models to find the best fit of a time-series model to past values of a time series.

In this paper, we will analyze the international passenger data series (G), as mentioned in the textbook Time Series: Forecast and Control by Box, Jenkins and Reinsel (ISBN: 978-0470272848). This textbook was first published in late 1960s, and is considered by many practitioners as the definite foundation textbook on the time series topic.

The Box-Jenkins methodology is a five-step process for identifying, selecting, and assessing conditional mean models (for discrete, univariate time series data). Establish the stationarity of your time series. If your series is not stationary, successively difference your series to attain stationarity.
