### Inheritance

#### **Answers**

Patterns of inheritance in humans include autosomal dominance and recessiveness, X-linked dominance and recessiveness, incomplete dominance, codominance, and lethality. A change in the nucleotide sequence of DNA, which may or may not manifest in a phenotype, is called a mutation.

Disease mechanisms in various dominant conditions are discussed in Chapter 12. Denoting  $D$  as the mutant allele and  $d$  as the wild-type allele, matings that produce children with an autosomal dominant disease can be

Genetics can explain how these kittens look different. Analyzing their genes can also help predict the appearance of their offspring. But most genes encode proteins that have nothing to do with outward appearance.
