Solution. We prove the rst part. The intersection of two convex sets is convex. There-fore if  $S$  is a convex set, the intersection of  $S$  with a line is convex. Conversely, suppose the intersection of  $S$  with any line is convex. Take any two distinct points  $x_1$  and  $x_2 \in S$ . The intersection of  $S$  with the line through  $x_1$  and  $x_2$  is convex.

Convex optimization is a subfield of mathematical optimization that studies the problem of minimizing convex functions over convex sets. Many classes of convex optimization problems admit polynomial-time algorithms, whereas mathematical optimization is in general NP-hard. Convex optimization has applications in a wide range of disciplines, such as automatic control systems,

estimation and ...
