Covers much of the same ground as Stephen Few's books, but is more scientifically rigorous. It's also not as glossy as Few's books, but it does include a few color pages. Of course, due to its age, Elements of Graphing Data doesn't include any research from after the mid-1980s. It is somewhat depressing that there has been so little progress in the field that advice published today doesn't ...

you can see where Tufte drew much of his inspiration, and where he expanded, clarified, and improved upon Cleveland's ideas. Much of this is simply due to advances in computer graphics, personal computers, and printing and display capability - it's been 27 years since Cleveland's book was published, and the WWW didn't even exist then.

Below is a graph with two points, B and D. In this figure:

- The x-coordinate of point B is 100.
- The x-coordinate of point D is 400.

Identifying the y-coordinate The y-coordinate of a point is the value that tells you how far from the origin the point is on the vertical, or y-axis. To find the y-coordinate of a point on a graph:

- Draw a straight line from the point directly to the y ...

The book Visualizing Data is a companion volume It focuses on graphical methods, the topic of Chapter 3 of this book; it presents far more methods than covered here and is more advanced, requiring a greater knowledge of statistics. But Visualizing Data does not delve into graphical perception, and takes Elements as a starting point.

A Graph consists of a finite set of vertices (or nodes) and set of Edges which connect a pair of nodes. In the above Graph, the set of vertices $V = \{0,1,2,3,4\}$ and the set of edges $E = \{01, 12, 23, 34, 04, 14, 13\}$. Graphs are used to solve many real-life problems. Graphs are used to represent networks.

graph structures for semantic queries with nodes, edges, and properties to represent and store data. A key concept of the system is the graph (or edge or relationship).The graph relates the data items in the store to a collection of nodes and edges, the edges representing the relationships between the nodes.

The core of The Elements of Graphing Data is a survey of different graphical methods, describing the most useful kinds of graphs and when they are appropriate. These include logarithm scales, distributions and qq-plots, dot plots, different representations of time series, scatterplot matrices, and coplots, with the use of colour and "brushing" (dynamic graphs) also touched on.
