Night sweats are hot flashes that happen at night, and they may disrupt your sleep. Although other medical conditions can cause them, hot flashes most commonly are due to menopause — the time when menstrual periods become irregular and eventually stop. In fact, hot flashes are the most common symptom of the menopausal transition.

How Are Night Sweats Different From Hot Flashes? Hot flashes are sudden feelings of warmth. Hot flashes can occur at any time during the day, and when they occur at night and provoke heavy perspiration, they are classified as night sweats. In some resources, night sweats are also called hot flushes, but they are distinct from flushing.
