Transport  
Modelling passenger  
flows in public  
transport facilities. This  
thesis describes the  
development of a new  
type of simulation tool  
for the assessment of  
designs of public  
transport facilities  
(stations, airports) and  
other public spaces  
with intensive  
pedestrian flows. Since  
the available space for  
such facilities is  
increasingly under  
pressure, the space

**Modelling public transport in the era of intelligent ...**

The key purpose of all transport systems is to facilitate the movement of

# File Type PDF Modelling Public Transport

passengers to their destination. People movement planning ensures pedestrian flow is optimised; it should be a central consideration in the design and operation of transport nodes and interchanges and in any investment decision to meet increasing travel demand.
