Multiple factor analysis (MFA) (J. Pagès 2002) is a multivariate data analysis method for summarizing and visualizing a complex data table in which individuals are described by several sets of variables (quantitative and /or qualitative) structured into groups. It takes into account the contribution of all active groups of variables to define the distance between individuals.

Preface I created this guide so that students can learn about important statistical concepts while remaining firmly grounded in the programming required to use statistical tests on real data. I want this to be a guide students can keep open in one window while running R in another window, because it is directly relevant to their work. In that spirit of openness and relevance, note that I ...
