regression line is  $\hat{y} = 2.71x + 88.07$ .

Even though we found an equation, recall that the correlation between  $x$  and  $y$  in this example was weak. Thus, this regression line may not work very well for the data. For example, for a student with  $x = 0$  absences, plugging in, we find that the grade predicted by the regression ...
