Bacteriological water analysis is a  
method of analysing water to estimate  
the numbers of bacteria present and, if  
needed, to find out what sort of bacteria  
they are. It represents one aspect of  
water quality.It is a microbiological  
analytical procedure which uses samples  
of water and from these samples  
determines the concentration of  
bacteria. It is then possible to draw  
inferences about the ...

Water has three characteristics, i.e. physical, chemical and biological characteristics. The raw treated water can be checked and analysed by studying and testing these characteristics as explained below:  
Contents:Physical Characteristics of Water  
1. Turbidity of Water  
2. Colour  
3. Taste and Odour  
4. Temperature of Water  
5. Specific Conductivity  
Chemical Characteristics of Water  
1.

1. Put a drop of saline, distilled water, or PBS on a clean glass slide 2. Using a sterile loop or needle touch an isolated colony and mix in the water drop. 3. Mix until just slightly turbid (light inoculum is best, excess bacteria will not stain properly). 4. Let air dry and heat fix. Do not overheat; slide should not be too hot to touch. 5.

## **Chapter 5 - Bacteriology**

An important aspect of water microbiology, particularly for drinking water, is the testing of the water to ensure that it is safe to drink. Water quality testing can be done in several ways. One popular test measures the

A given species may undergo a phenomenon called S-R variation whereby the cell loses the ability to form a capsule. Some capsules are very large and absorb water; bacteria with this type of capsule (e.g., *Klebsiella pneumoniae*) form mucoid (M) colonies. 9.

Enhancement of the pathogenicity of other species in a mixed infection. 10.

**Bacteriology - LinkedIn SlideShare**  
Bacteriology is the branch and specialty of biology that studies the morphology, ecology, genetics and biochemistry of bacteria as well as many other aspects related to them. This subdivision of microbiology involves the identification, classification, and characterization of bacterial species. Because of the similarity of thinking and working with microorganisms other than bacteria, such as ...
